RE: Third Party Verification of eTool LCA Software

To Whom it May Concern:

During 2012 I was commissioned by eTool to review and assist in improving the accuracy and scope of the eTool Software. This work was undertaken as part of a larger project jointly funded by Commercialisation Australia and eTool. In summary, the verification work consisted of the following key elements:

- 1) Scope Verification
- 2) Formulas testing
- 3) Data Verification
- 4) Overall LCA Result Comparisons with other LCA reports
- 5) Assistance in improving accuracy of the above items

My assessment of the eTool software was that it required little or no improvement to scope and accuracy to be suitable for commercial release and that the results being generated from eTool compared well with studies of similar buildings. A number of recommendations were however put forward to further enhance the scope and accuracy of eTool which, I then aided in implementing.

My testing was limited to the Carbon Emissions calculations within eTool. eTool have made it clear this is the intended focus of software and as such no testing was conducted on other environmental indicators or costs.

Yours sincerely

Ben Rose
